

HEALTH FINANCING AND MORTALITY RATE IN AFRICA (2002-2022)

Exploring how health expenditure, out-of-pocket payments, governance, and demographics relate to mortality across African countries.

KEY INSIGHTS

- Mortality has declined across all regions, with disparities remaining.
- Higher health spending is associated with lower mortality, up to a point.
- High out-of-pocket (OOP) burden weakens the benefits of health spending.
- COVID-19 (2020-2022) period saw setbacks in many countries.

AVG MORTALITY
(per 1,000 population)

9.361

Min: 4.593 | Max: 19.80

AVG HEALTH EXPENDITURE
(International \$ per capita)

122.8

Min: 0.4272 | Max: 1,257

AVG OUT-OF-POCKET (OOP)
(% of total health spending)

39.82%

Min: 2.993 | Max: 86.50

AVG POLITICAL STABILITY
(Index: -2.5 to 2.5)

-0.5245

Min: -2.665 | Max: 1.201

AVG AGE DEPENDENCY RATIO
(per 100 working-age population)

79.40

Min: 38.39 | Max: 110.9

1. MORTALITY TRENDS OVER TIME (BY REGION)

Crude death rate per 1,000 population

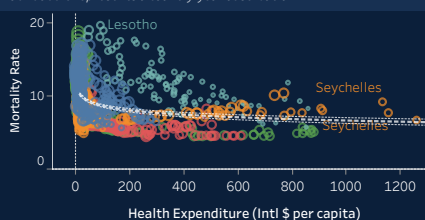

Region

- Central
- East
- Northern
- Southern
- West

2. HEALTH EXPENDITURE VS MORTALITY

Each bubble represents a country-year observation

Region

- Central
- East
- Northern
- Southern
- West

OOP in %

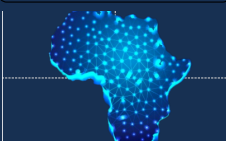

- 2.99
- 20.00
- 40.00
- 60.00
- 86.50

ABOUT THE DATA

Data Source: World Bank
Development Indicators

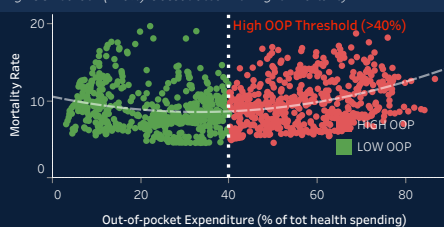

Coverage: 51 African countries
(2002-2022)

Note: COVID-19 indicator = 1 for years
2020-2022.

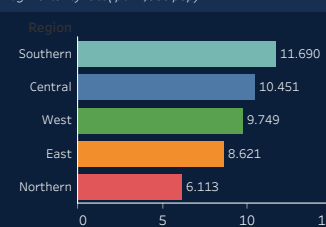

3. OUT-OF-POCKET BURDEN VS. MORTALITY

High OOP burden (>40%) is associated with higher mortality

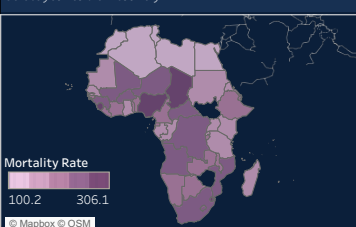

4. AVG MORTALITY BY REG.

Avg mortality rate(per 1,000 pop)

5. MORTALITY RATE BY COUNTRY

Select year to view country

Source: World Development Indicators | Note: Covid-19 period(202-2022) may have affected trends due to disruptions in health services.
